

Amin Hosseinniya

Data Scientist | ML Engineer

AminHosseinniya@gmail.com • +98 933 249 8948 • [linkedin.com/in/AminHosseinniya](https://www.linkedin.com/in/AminHosseinniya)

SUMMARY

Data Scientist with 5+ years of professional experience translating ambiguous business problems into data stories, experiments, and production-grade models across commodity trading, food-delivery marketplaces, and industrial sectors. Comfortable across the full analytics stack, from experimentation and statistical modeling to time-series forecasting, ranking and recommendation, and LLM orchestration, with end-to-end ownership from prototyping to productionisation. Works with stakeholders from operational users to leadership, converting messy inputs into measurable KPIs and dashboards that drive daily business decisions. M.S. in IT Engineering with a thesis in EEG-based cognitive load detection using heterogeneous GNNs.

PROFESSIONAL EXPERIENCE

Data Scientist | [ACER Trading](#)

Jan 2026 - Present

- Sole owner of the company's data and analytics function, autonomously translating ambiguous business problems into data stories, KPIs, and structured analytical outputs that drive daily operational decisions.
- Designed the underlying data model in PostgreSQL across 10+ tables and built reproducible Python ETL pipelines (packaged as reusable internal libraries) feeding 4 Metabase dashboards for real-time vessel tracking, trip-level analytics, and daily trading reports used by a 20-person operations team.
- Defined the metric design and reporting structure for the operations platform end-to-end, turning previously unmeasured workflows into trackable, decision-ready signals.
- Managed stakeholders from operational users to executive leadership, communicating complex analytical results and converting non-technical business questions into measurable KPIs.

Data Scientist | [Snappfood](#)

Feb 2025 - Jan 2026

- Built an LLM-based voice analytics pipeline processing ~6,000 customer calls/month (averaging 2-7 minutes each) at the country's largest food-delivery marketplace, taking the solution from prototype to production: audio transcription → LLM-based extraction to isolate content → structured tabular outputs, reducing complaint processing time by ~80%.
- Integrated OpenAI, Gemini, and LLaMA APIs selectively, choosing between models per stage based on evaluation metrics and cost-effectiveness, with the pipeline designed for scalability and long-term maintainability.
- Embedded with the Strategy team on high-stakes business questions (vendor churn drivers, voucher response by user segment, monthly order variance), applying observational causal analysis, cohort exploration, and data storytelling to shape product and operational decisions at leadership level.
- Designed the downstream database schema from scratch and built the full ETL pipeline loading structured complaint data into the company's centralised data infrastructure, collaborating cross-functionally with Data Engineering to enable data-driven decisions from previously unstructured voice feedback.
- Designed a geospatial coverage analysis model across ~50,000 vendors in 120 cities to identify distribution gaps and inform vendor acquisition strategy at the marketplace level.
- Structured the modeling pipeline end-to-end across all four vendor complaint channels (voice calls, Jira tickets, social media, and the vendor-side app), producing a reusable, modular framework for downstream complaint analytics.

Data Scientist | [Faratrah Steel](#)

Mar 2024 - Feb 2025

- Built a weekly commodity-exchange price forecasting model combining XGBoost and ARIMA over four years of national exchange data (demand, traded quantities, participating companies, time-based features) enriched with FX rates.
- Reduced prediction error by 18.5% against the legacy model, which carried ~38% MAE and was effectively unusable, producing forecasts the planning and supply teams could finally act on.
- Productionised the model against the company database with automated weekly data refreshes; outputs guided procurement decisions across the planning and supply departments.
- Built a scalable, maintainable customer credit-scoring pipeline run monthly on fresh customer data from the finance team, scoring ~300 customers and informing roughly \$1M in managed credit.
- Designed a customer segmentation framework identifying 6 distinct credit tiers, from full credit eligibility to no-credit, replacing an opaque, ad-hoc credit process with a transparent, consistent system.
- Built KPI monitoring dashboards to track business performance continuously and drive data-informed decisions across departments.

Intern Data Scientist | [Sheyda VOD](#)

Dec 2023 - Mar 2024

- Designed and implemented a content ranking and recommendation system, plus a conversational assistant, for a VOD platform offering movies, series, documentaries, and talk shows.

- Applied BERT and transformer-based semantic matching to power personalised content ranking, mapping user preferences to relevant items across a heterogeneous catalog.
- Prototyped and productionised the ranking and NLP models in Python, TensorFlow, and PyTorch, integrating them into the platform prior to public launch.

Data Science Instructor | [Karyar College](#)

Apr 2023 - Nov 2023

- Designed and delivered a hands-on data science curriculum covering Python (NumPy, pandas, matplotlib), EDA, and foundational ML workflows, mentoring students through the end-to-end data science process.

Software Developer | [Nasir Driving Simulator](#)

Feb 2022 - Mar 2023

- Developed the TCP/UDP socket-based client-server networking layer enabling real-time data exchange between the supervisor and trainee stations of a driving simulator.

Teaching Assistant | [K.N. Toosi University of Technology](#)

Oct 2020 - Jan 2022

- Mentored undergraduates as teaching assistant for programming courses in Python, C++, and MATLAB.

TECHNICAL SKILLS

Programming Languages: Python, SQL, R

Experimentation & Statistics: A/B Testing, Causal Inference (Observational, Driver Analysis), Experimental Design, Hypothesis Testing, Statistical Inference, Metric Design & Validation, ARIMA, Prophet, SMOTE

Machine Learning: Scikit-learn, XGBoost, LightGBM, Random Forests, SVM, Logistic/Linear Regression, Naive Bayes, K-Means, DBSCAN, Hierarchical Clustering, PCA, UMAP, t-SNE

Deep Learning: PyTorch, TensorFlow, Keras, PyTorch Geometric, Transformers, Attention, CNNs, RNNs, LSTMs, GRUs, Autoencoders, GANs, GNNs (GCN, GAT, RGCN)

NLP, LLMs & Ranking: HuggingFace, BERT, Transformers, Sentence Embeddings, Semantic Matching, Content-based Recommendation, Personalisation, Fine-tuning, LLM Integration & Orchestration, Prompt Engineering, RAG

Analytics & BI: Tableau, Power BI, Metabase, Dashboard Design, KPI Definition, Stakeholder Reporting, Data Storytelling

Databases: PostgreSQL, MySQL, SQL Server, SQLite

Data Engineering: ETL, Schema Design, Apache Spark, Pipeline Orchestration

APIs & Tools: FastAPI, Flask, REST APIs (building & maintaining), Git, Docker, Streamlit, Python Libraries & Modules

EDUCATION

M.S. IT Engineering - Tarbiat Modares University (GPA: A)

Oct 2023 - May 2026

Thesis: Detection of Cognitive Activities in EEG Signals Using Graph Neural Networks.

B.S. Mechanical Engineering - K.N. Toosi University of Technology (GPA: A)

Oct 2018 - Aug 2023

Thesis: Automated Femur Extraction from X-Ray Images Using Convolutional Neural Networks.

HONORS & AWARDS

- Top 1% of ~145,000 applicants in the nationwide undergraduate entrance examination (2018).
- Top 2% of ~15,000 applicants in the nationwide graduate entrance examination (2023).
- Full Tuition Scholarship, awarded consecutively for academic excellence across both Bachelor's and Master's programs (2018-2026).

CERTIFICATES & LANGUAGES

Certificates: Task-Oriented Bootcamp in Data Science, [Quera](#) (2022); Machine Learning, [Coursera](#) (2021).

Languages: English (IELTS 7.5), Persian (Native), Kurdish (Native).

SOFT SKILLS

- Strong communication and interpersonal skills
- Calm and composed under pressure
- Critical thinking and problem-solving
- Self-starter and lifelong learner
- Ownership mindset on projects end-to-end
- Big-picture thinking without losing the details
- Friendly, energetic, and trustworthy
- Comfortable working independently or as part of a team

VOLUNTEER EXPERIENCE

- Co-founder of the Radio Graph Podcast.
- Board Member of the Culture and Literature Club, K.N. Toosi (2019-2023); Club Manager for two years.
- Podcast Workshop Instructor at Salam High School.
- Member of the K.N. Toosi University Alumni Association and the AUT Hiking Group.

HOBBIES & INTERESTS

- **Books:** novels, poetry, engineering
- **Sports:** hiking, bodybuilding, football
- **Games:** board games, chess, cards
- **Music:** playing and teaching daf, playing setar (Persian instruments)
- **Other:** travelling, movies
